

SECURITY AWARENESS AND SAFETY TRAINING:

Businesses that implement Security Awareness & Safety Training experience a reduction in the chance of a staff member clicking on a malicious e-mail from 30% to 5-10% according to Deloitte.

The training which L2 Cyber Security Solutions provide is probably the most comprehensive on offer in the country. Other providers only focus on protecting e-mail usage, whereas we make the learner aware of other threats such as Wi-Fi Eavesdropping, Social Engineering and CEO Fraud. We also have a well-received section on how to create unique and strong passwords, as well as best practices for using mobile devices.

Structure

We provide an interactive workshop, with individual and group participation in discussing Cyber Security. There are short videos also included in the material to show real world examples of hacking.

The full programme is made up of 6 modules:

1. Identify malicious e-mail and spot Social Engineering in action.
2. Acquire safe web browsing practices.
3. Create strong and unique passwords.
4. Learn what threats there are.
5. Implement best practice with mobile devices.
6. Understand good computer practices.

These can be delivered individually as Breakfast Briefings/Lunch & Learn sessions. Two or three modules can be selected for a half-day session, or the full list can be delivered in one day.
